DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, 10-12, and 13-15, drawn to a method of fabricating a transistor and patterning an amorphous semiconductor film, classified in class 438, subclass 149+.
 - II. Claims 16-21, drawn to a structure of thin film transistor (TFT), classified in class 257, subclass 49+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, within the methods in Group I, one of the methods describes how to make an amorphous film used in a transistor however in Group II, the structure of the TFT does not use the specified amorphous film and therefore the device can perform with any other type of silicon film for example, the film may be polysilicon.
